

Inficold

Datalogger for Milk Chilling Operations

It integrates with Bulk Milk Coolers to monitor critical field data such as milk quantity, temperature, & power consumption, etc. It uploads the data on server to provide deep insights into field operations, and predict maintenance. Broad adoption of this product across collection centers can lead to improved milk quality and reduced operating expenses. These insights can help identify cost saving

Features

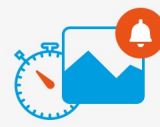

Spike & surge compliant

99.9% uptime

Performance comparison

Realtime configurable alerts

Predictive Maintenance

Specifications

- Data transmission - GSM / WIFI
- Onboard data storage for internet outage
- Sensing - CIP, Milk Lifting, Milk Temperature, Grid/DG status, Power, LP, & HP trigger, Energy consumption (Compressor & Agitator, etc)
- Weight measurement (via pressure transducer / load cell)
- Data analytics with periodic summaries of system performance
- Cooling equipment & health monitoring and predictive maintenance warnings
